Campus Plans Begin to Take Shape

By DeWayne Lehman

Plans for the redevelopment of the University of Massachusetts Boston campus recently moved from concept to first-phase implementation with the announcement of new funding for facility development and the selection of an architect for the first new academic building.

The state’s $2.2 billion Higher Education Bond Bill, approved by the legislature in July and signed by Governor Deval Patrick early last month, included $125 million for the UMass Boston campus. The bulk of the funding, $100 million, is designated for a new academic building; the remainder will be devoted to stabilizing the existing campus substructure.

Nearly coinciding with the funding approval was the selection of the Boston architectural firm Goody Clancy to conduct a preliminary design for the campus’s first new academic building in some 35 years, an Integrated Sciences Complex. The new building, expected to be situated adjacent to the Campus Center in the area of the current North Parking Lot, will provide multidisciplinary lab and research space, according to Ellen O’Connor, vice chancellor of administration and finance. Within the coming year, UMass Boston also anticipates moving forward with a second new facility, a general academic building, as part of the master plan, O’Connor said.

“This is great news for both our students and our faculty,” Chancellor J. Keith Motley said.

The first new academic building will be adjacent to the Campus Center; both will be served by a reconfigured roadway. (Image courtesy of Chan Krieger Somenczuk)

Genzyme Partnership Helps Students and the State

By Geoffrey Kula

In an ongoing effort to help keep the Bay State’s biotech industry competitive, the University of Massachusetts and Genzyme have partnered to create the Genzyme/UMass Scholars Program, a paid summer internship for selected undergraduates in which they gain practical industry-related work experience and see firsthand how biotech products are developed and brought to market.

Juniors pursuing a life sciences degree at one of the university’s four undergraduate campuses are eligible to be considered for the program, and this year, each received a $5,000 grant toward their senior-year tuition and fees upon successful completion of their internship work assignment. Students also benefit from the Genzyme/UMass Scholars Program.

“Along with Chancellor Motley and Senior Vice President and Interim Chancellor Collins, I appreciate Genzyme CEO Henri Termeer’s continued strong commitment to the University of Massachusetts and congratulate the UMass Boston students who were selected for the program.”

“Our goal during the first year of the UMass/Genzyme Scholarship has been to make a valuable contribution by recruiting, developing, and supporting students in the biomedical sciences disciplines,” said Genzyme spokesperson Shawna Ferguson. “Our UMass/Genzyme scholars are learning new research skills through internship assignments and professional development skills by participating in our student seminars. Also, our scholars have the opportunity to reflect on and share what they’ve learned by participating in science symposiums, presentations, or final project overview reports. To support students’ and Genzyme’s commitment to the community, some of our scholars have participated in Genzyme’s community relations events as well. Having a chance to connect with each scholarship student, I can say that each scholar has something unique to contribute to the biotechnology industry.”

After interning at Genzyme this summer, Laura Kibuuka is now considering a career in biotech. (Photo courtesy of Genzyme)

This summer, four UMass Boston students—biology majors Jamie Webester, Alex Bitter, and Laura Kibuuka, and biochemistry major Afamefuna Nduagha—were recognized for their outstanding academic achievements and were among the first group selected. Kibuuka and Nduagba are also members of the Urban Massachusetts Louis Stokes Alliance for Minority Participation (UM-L).

University to Help Local Businesses, and Itself

By DeWayne Lehman

UMass Boston last month became the first university to join a Boston program that supports local business development across the city’s neighborhoods—and encourages charitable giving to the university itself.

In a unique partnership between UMass Boston and the city’s Boston Main Streets program, the university will promote the Boston Community Change affinity card among students, faculty, staff, and alumni. In exchange, the university will be added as a charity to which cardholders can direct donations. The Community Change card, when used at participating businesses throughout Boston’s 19 Main Streets neighborhoods, produces funds for administration and finance.

Nearly coinciding with the funding approval was the selection of the Boston architectural firm Goody Clancy to conduct a preliminary design for the campus’s first new academic building in some 35 years, an Integrated Sciences Complex. The new building, expected to be situated adjacent to the Campus Center in the area of the current North Parking Lot, will provide multidisciplinary lab and research space, according to Ellen O’Connor, vice chancellor of administration and finance. Within the coming year, UMass Boston also anticipates moving forward with a second new facility, a general academic building, as part of the master plan, O’Connor said.

“This is great news for both our students and our faculty,” Chancellor J. Keith Motley said.

This summer, four UMass Boston students—biology majors Jamie Webester, Alex Bitter, and Laura Kibuuka, and biochemistry major Afamefuna Nduagha—were recognized for their outstanding academic achievements and were among the first group selected. Kibuuka and Nduagba are also members of the Urban Massachusetts Louis Stokes Alliance for Minority Participation (UM-L).
vices customers with an earned cash rebate and directs a portion of each purchase to support Boston Main Streets districts and a nonprofit or school of the cardholder’s choosing. Boston Main Streets, founded by Mayor Thomas M. Menino in 1995, has become a national model for supporting and revealing neighborhood commercial districts. 

“We know how important small businesses are to local economies and healthy communities, and we welcome the opportunity to support the work of the Boston Community Change Card program,” said Chancellor J. Keith Motley, who was the 6,546th person to sign up for a card. “Boston Community Change is an innovative way to support local businesses and our university.”

The Boston Community Change Card was founded in 2006, and the card is now accepted by more than 200 businesses in neighborhoods from West Roxbury and Dorchester to East Boston and Allston-Brighton. The program encourages people to “shop locally, share locally.”

The partnership with Boston Main Streets is an outgrowth of community relations efforts in the Office of Government Relations and Public Affairs. UMass Boston has a tradition of assisting neighboring Main Streets districts, usually around their fundraising activities. This partnership will help extend the university’s reach and assistance across the city, said Gail Hobin, assistant vice chancellor for community relations.

“We have students, faculty, and staff in every Boston neighborhood, so this is a great opportunity to help make a difference. At the same time, you’re helping the university and earning a rebate,” Hobin said.

For more information or to sign up for a card, visit www.bostoncommunitychange.org.

Genzyme Interns (cont. from page 1)

SAMP program, which actively recruits students underrepresented in STEM fields, and Nduagba is a member of the Ronald E. McNair Post-Baccalaureate Achievement Program, which provides opportunities for undergraduates from underrepresented groups to excel in science- and math-related fields, work toward doctoral degrees, and undertake careers in college teaching. In addition to their research, these four students attended Genzyme-sponsored seminars and workshops on leadership and career development designed specifically for the student interns.

In a typical week, Nduagba works with two sets of cell lines—mouse embryonic cell lines and human liver cells—infects them, harvests them, and extracts RNA to make DNA to determine how the cells react to the virus. Over time, he analyzes his data for trends. He hopes his work at Genzyme can help the company develop a diabetes treatment. “Every day gets you closer to a solution,” he said.

Nduagba, who plans to become an MD/PhD, conduct research, and teach, said his summer experience has helped him in more ways than one. “Getting that extra experience working in a different lab, working on different projects, gaining a different point of view— it’s helped me clarify my plans for the future and made me more marketable,” he said. “Having it on my resume makes me look good and feel more confident about the eventual job hunt.”

In addition to the new technology and techniques he’s been exposed to, said Webster, he attended presentations on the business of science and medical careers. Webster, who ranked fourth out of 135 students in Professor of Biology Rick Kessel’s general genetics course, is thrilled to have had this opportunity. “Getting good grades is one thing,” he said, “but getting rewarded for it is another.”

Another Kessel genetics student was Bitzer, who has spent his summer working with Genzyme’s orthopedics research group to discover the mechanism through which people develop osteoarthritis and to synthesize a product that will relieve both pain and structural abnormalities and pain. “Overall, the goal is to find the mechanistic pathways for pain regulation in models afflicted with osteoarthritis in order to improve current drug treatments,” he explained.

Bitzer’s time at Genzyme’s Framingham campus has rekindled an interest in research. “My plan was always to go to medical school, become an endocrinologist or orthopedic surgeon, practice and then retire,” he said. “Now I think I would still like to choose the path of pursuing my MD, but after practicing for several years, I could definitely see myself working for a biotech company like Genzyme, doing research. Certainly am more intrigued by the biotech industry after working at Genzyme for a couple of months.”

For some, analyzing rat and human knee joints might not sound like the ideal way to spend the summer, but Bitzer feels otherwise. “I am very grateful to both UMass and Genzyme for making this internship experience possible, and I certainly recommend that anyone eligible take full advantage of it, because although going to the beach with friends every day during the summer may seem like a good alternative, I definitely would not have enjoyed my summer as much had I declined the opportunity to intern at Genzyme. Bitzer’s supervisor is also pleased with his intern’s choice of summer activity. Kessel said that Bitzer has been offered the opportunity to continue his internship this fall.

Another student who jumped at the chance to work at Genzyme was Laura Kibuuka, who worked with a team that conducted tests to see which components of drugs are attacked by antibodies, in order to develop strategies to neutralize the attack or change the drug so that it works more efficiently and effectively.

“Those students will be stars of the future.”

Kibuuka, who hopes to eventually attend medical school, describes her summer as an “eye-opening experience,” fostering (respect for the biotech industry, the people who work in it, and the amount of research that goes into making safe, effective medications. “I had never considered [a career in] biotech before,” she said. “Always interested in becoming a doctor, but right now, [joining the biotech industry] is pretty close in the running with attending medical school.”

The combined experience of these students confirms the expectations Kessel had of the program. “What I hope to see from the Scholars Program are opportunities for students to see the industry side of biological sciences,” he said. “This will allow them to develop knowledge of a new set of tools and techniques, and thus broaden their knowledge of biomedical research. They will also, hopefully, learn of alternative ways to attack problems and troubleshoot and integrate different techniques. These students will be stars of the future.”

Genzyme’s Ferguson agrees, noting that it’s not only vital to the state’s economy to have a well-trained biotech workforce, but vital to the overall health and well-being of patients who are waiting for new medicines to become available.

“There is a growing need for a diverse talent pipeline to work in biotechnology and contribute to the development of patient therapies around the world,” she said. “The opportunity to partner with UMass, a state university, to help create a talent pipeline for Genzyme supports our business goals while influencing academic curriculum and developing students. This partnership is a win/win for students, educators, and Genzyme.”

Marine Operations Crew Covers the Waterfront

By Danielle Dreilinger

The latest addition to the Fox Point fleet arrived on August 14, its shiny white hull and new-boat smell belying its purpose: pumping sewage from boats in Boston Harbor.

Though many know the Division of Marine Operations mostly through its harbor tours, the staff does quite a bit more than help the UMass Boston community have fun on the water: They educate and connect with the greater Boston community through classroom support, provide sailing lessons, promote environmental education and educational research programs, and much more.

“We’re pretty engaged,” said director of marine operations Chris Sweeney.

Anyone can join the community sailing program and learn to sail at their own pace for a bargain price: just $144 for university faculty and staff. “It’s one of the best deals going in town,” said sailing master Jason LeBlanc, who encourages people to try their hand at sailing. After all, the university’s mission is “to provide access to things people wouldn’t normally have access to,” he said.

Though sailing has an elitist reputation, LeBlanc says that 90 percent of the sailing team’s members learned to sail at UMass Boston.

During the school year, the program uses all work-study students; in the summer, the program employs three to six teenagers from Mayor Thomas Menino’s summer jobs program. Student employees learn to sail, care for boats, and teach others, developing leadership and mentoring skills, LeBlanc said.

He should know—raised in Savin Hill, he’s a UMass Boston sailing kid himself. “I actually learned to sail through this program,” he said. In a neighborhood with limited options for youth, “to have this program, access to this program, was just a life-changing experience for me.”

Getting the sailing master job in 2004 “was like coming home for me,” he said. Part of LeBlanc’s charge when he took over was to revitalize that sailing team. Though the intercollegiate team formed only two years ago, it’s currently ranked 25th of 45 teams in the division, competing in 30-plus events each year.

“UMass Boston has one of the best sailing venues in the country and it’s just underutilized,” said LeBlanc.

Some local professors recognize its usefulness, though. University sailors bring academics from all around the area—UBI, Harvard, Northeastern,” said Sweeney—to do research on Boston Harbor islands too small to have their own docks.

“We’re the only university directly on the ocean in the greater Boston area,” he said, “so we’re often solicited by other schools.”

The division makes the most of its resources, maintaining the original 14-boat fleet from when the program started, and rebuilding 10 boats in the last four years.

More recent additions include three college racing boats donated by Boston College and a former Coast Guard vessel. The M/V Columbia Point, most familiar to the UMass Boston community from the summer Monday harbor cruises, also doubles as a mobile classroom, with a flat-screen TV to show images from the boat’s navigation equipment.

In addition to all of those activities, Marine Operations has begun working in a new direction: helping keep local waters clean. Boston Harbor was recently designated as a “No Discharge” area, meaning that boaters are no longer allowed to dump sewage directly into the water. Compliance with that designation depends on having adequate pumpout facilities, both onshore and in the water, to prevent boat operators from taking the easy route.

That’s where the new boat comes in: Most pumpout vessels are slow and hard to maneuver; this one will have greater mobility, able to get in and out of tight spaces quickly. With a nearly 1,000-gallon capacity, the boat will make house calls to recreational and commercial boats, pumping them out free of charge.

But that’s just part of the pumpout boat’s mission: In keeping with the UMass Boston spirit of combining teaching, research, and community service whenever possible, the boat will also serve as a mobile research platform for faculty projects as well as those of students, particularly advanced-degree candidates in the Environmental, Earth, and Ocean Sciences Department, where they’ll look for ways to keep clean not only Boston Harbor, but coastal waters everywhere.

“We actually have students in line waiting to get out on the boats,” said SEOS assistant professor Anamarija Frankic, who along with students Chris McIntyre and PhD candidate Prasede Vella came down to Fox Point to check out the pumpout boat as it pulled into the dock for the first time.

“They’re basically using the interdisciplinary sciences to help keep the harbor clean, and testing methods which can be applied in other harbors,” said Frankic.

“They all support Boston Harbor’s ‘No Discharge’ zone application, monitoring, and outreach activities.”

All the World’s a Page: 400 Years of Shakespeare in Print

By Geoffrey Kula

An exhibit at the Boston Public Library, co-curated by English professors Scott Maisano and Cheryl Nixon as well as several graduate students, “All the World’s a Page: 400 Years of Shakespeare in Print”—on display in the BPL’s Rare Books Exhibition Room from September 20 through November 30—raises more questions than it answers, serving as a launching pad for an examination of the assumptions students and scholars alike have about William Shakespeare.

The exhibit is the latest in a series produced through a partnership with the BPL, that is led on the UMass Boston side by Nixon, who served as the lead grant writer in a successful effort to land a President’s Creative Economy Grant, the funder of the partnership, which began with a Nixon-curated exhibit, “Crooks, Rogues, and Maids Less Than Virtuous.”

In the current exhibit, the centuries-old books resting behind protective glass are not so much diamonds in the rough as they are hidden jewels: flawed, one-of-a-kind copies of the Bard’s most famous works, each worth millions. The theory behind the display, according to Maisano, is “to show how and why books themselves—as objects free of the content within—influence our understanding of a particular work.”

Maisano said he began mulling this idea last year, and explored it more fully in an essay he wrote for the Shakespeare Yearbook titled “Shakespeare’s Dead Sea Scroll: On the Apocryphal Appearance of Pericles,” about one of Shakespeare’s less-frequently-taught plays. Considered a “bad quart”, because it is not included in Shakespeare’s First Folio (the “complete” collection of his work, printed in 1623), this play was not an accurate reflection of the Bard’s abilities, according to conventional wisdom. Shakespeare, it was felt, couldn’t have written a bad play; printers must have botched the job.

Maisano, however, saw things in a different light. His article proposed that Pericles was supposed to look like the remnant of a lost civilization, a ravaged land like the biblical Sodom and Gomorrah, and that its faults were not incidental or accidental, but central to understanding the play. As an example, Maisano cites The Norton Complete Works of Shakespeare, a commonly used undergraduate English student’s book, for which editors reconstructed the text of Pericles, removing anything that didn’t jibe with their preconceived ideas of what the play might have looked like before going to print.

“Students will encounter a 20th-century fabrication rather than the play Shakespeare’s contemporaries would have read,” he said. He also pointed out that Hamlet’s most famous line, “To be or not to be, that is the question,” does not appear as such in a 1603 version of the text. So which Hamlet is correct? Maisano (continued on page 4)

September 2008 • The University Reporter • 3
By Nancy Riorian

On July 5 at the Al Rasheed Hotel in Baghdad's Green Zone, Iraqi parliamentarians and diplomats from several countries gathered to participate in the signing of the Helsinki II Agreement, drawn up during two rounds of secret meetings in Helsinki, Finland.

The agreement defines 17 principles, to which all parties subscribe, and designates the contextual framework that will enshrine the rules of behavior and conduct among and within parties and alliances, and among parties and government, and that will inform discussion and provide the guidelines for resolving matters of procedure and process. To monitor compliance with the principles, the agreement contains 15 chapters and six outline the implementation measures that will be developed.

The meetings in Helsinki were organized by the Iraqi Project, a joint venture of the John W. McCormack Graduate School of Policy Studies (MGS), the Institute for Global Leadership (IGL) at Tufts University in Medford, Massachusetts, and the Crisis Management Initiative (CMI), Helsinki, Finland.

The Project's director, Padraig O'Malley, who is the John Joseph Moakley Distinguished Professor of Peace and Reconciliation at MGS, spent six of the last twelve months in Baghdad meeting with members of the Iraqi parliament and government to arrange the meetings in Helsinki.

The Iraqis met with the senior negotiators from South Africa, including Cyril Ramaphosa, chief negotiator for the African National Congress (ANC) under the leadership of Nelson Mandela; Roelf Meyer, chief negotiator for South Africa's last whites-only government; and Mac Maharaj, who was co-secretary of the South African negotiating process. Senior negotiators from Northern Ireland included Martin McGuinness from Sinn Fein, respectively former chief of staff of the Irish Republican Army (IRA) and currently deputy first minister of Northern Ireland; Jeffrey Donaldson from the Democratic Unionist Party (DUP), the hard-line pro-British party of Reverend Ian Paisley; and Lord John Alderdice, chairperson of the International Monitoring Commission (IMC) who oversaw the decommissioning of arms by paramilitary groups in Northern Ireland.

In 1993, at the height of negotiations in South Africa, the University of Massachusetts Boston conferred honorary degrees on Ramaphosa and Meyer, who were also joint commencement speakers. O’Malley had organized a similar meeting for the Northern Irish in South Africa with their South African counterparts in 1997.

The meetings that led to the Helsinki Agreement were largely funded by Robert Bendetson, CEO of Cabot House furniture, a trustee of Tufts University, a member of IGL's external advisory board, and a former student of O'Malley's at Tufts.

Reaching for comment in Beirut, where he is currently working on another book (O’Malley’s last work, Shades of Difference, a political biography of Mac Maharaj, is available at the Boston Bookstore), O’Malley paid a special tribute to Ms. Sweeney’s two vice presidents who saw the value in going forward with this initiative when he first proposed it to them in June 2007. “They jumped on board. They caught the idea behind the process right away and gave it their full blessing. That made bringing others on board a lot easier.” O’Malley said. “It was no accident that the participants from the South Africa Indaba (gathering) were in Helsinki. These were people who knew each other and who had developed camaraderie over the years that made them a seamless team of facilitators at Helsinki, and that camaraderie made their interaction with the Iraqis easier and at the same time more forceful. The principle underlying these talks is very simple: the almost too obvious notion that people from divided societies are in the best position to help people from other divided societies.

“The conflicts, of course, are different, but the behaviors of peoples in conflict tend to be similar. In this way they can benefit from hearing the narrative of what negotiators from other conflicts went through as they struggled out of violence into non-violence, from positions of ‘never’ to positions of compromise, from facing the tasks of carrying a new message to their constituencies as they moved from one course of action to another to bringing them fully on board. Hearing the Northern Irish and South African narratives of conflict and negotiation and then settlement, the Iraqis were able to identify with what they were hearing and adapted some of the documents used in both conflicts to their own use.

“Now we have transferred ownership of the process we began in Helsinki just one year ago to the Iraqis. Whatever role we, the convenors and the facilitators from Northern Ireland and South Africa play, in the future depends entirely upon the Iraqis. We stand ready to serve if called upon. But the Iraqis are now equipped with a set of tools to bring to reality the prospects of a stable and secure Iraq.”

Nancy Riorian, a 2007 John W. McCormack Graduate School of Policy Studies MSPA IR graduate, accompanied O’Malley to Helsinki I, II, and Baghdad. Others from UMass Boston who attended Helsinki II are Patricia Peterson, managing editor of the New England Journal of Public Policy; Rajini Srikanth of the English Department; Andrea Crawsell, a 2007 MSPA IR graduate; and John Lewis Moore, a 2008 dispute resolution graduate.

Shakespeare (cont.)

says that readers could despair at this lack of consistency, or they can recognize it for what it is: a demand for active interpretation, rather than rote recitation, of Shakespeare's texts.

“There is no definitive Shakespeare,” he said, noting that no two of the approximately 200 First Folios in existence are identical. Compounding the mystery is the Third Folio, which contains seven plays not found in any known copy of the First.

“How, 30 years after his death, did Shakespeare’s output increase by 20 percent?” Maisano speculates that, as Shakespeare’s celebrity increased, “editors wanted to slap his name on anything so they could sell it.”

Boiled down to its essence, said Maisano, “All the World’s a Page” serves as a show-and-tell.

“These [books] are as close as we can get to Shakespeare himself,” he said. “People are drawn to the exhibit by the aura of Shakespeare the author, but once inside the exhibit, they realize that Shakespeare's authority dissolves into all these other questions. If you see three different performances of Hamlet at three different theaters, you see three versions. And the same is true in print: The books themselves shape and influence how and what we think of Shakespeare.”

The Boston Public Library's Acting Keeper of Prints, Rare Books, Manuscripts and Archives, Susan Glover, agrees. “The students’ interpretation of Shakespeare and his work illustrates to the public the impact and importance of Shakespeare on subsequent generations of thespians as well as the viewing public.”

Additionally, by putting these rarely seen volumes on display, Maisano aims to restore the “bookiness” to tomes which have spent the bulk of their existence locked away in a vault. “The exhibit gives UMass Boston students and the general public firsthand access to these rare books without the endowment or legacy of a larger institution,” he said. “It democratizes, as much as possible, these treasures.”
CAMPUS NOTES

PRESENTATIONS, CONFERENCES, AND LECTURES

Professor of Sociology Samah Mo- vahed organized and presided over a special session at the American Sociological Association meeting in Boston on August 2. He also presented a paper, “The Old Diagnosis of ‘Dangerousness’: Should the Designation of ‘The Enemy Combatant’ become a New Category in DSM-V?” at the Annual Meeting of the Society for the Study of Social Problems in Boston on August 2, and another paper, titled “Dress, Fashion and Psychoanalysis,” at the annual meeting of the Psycho and Social Conference in Boston on July 31.

Associate Professor Margaret McAlister of the College of Nursing and Health Sciences was recognized at the National Health Service Corp Ambassadors National Meeting in Phoenix, Arizona, from July 24 through 26 for her poster presentation, “The Gnome Model: A Tool for Implementing NP Capstone.” The Gnome Model was developed by her and colleagues Louise Chickie-Wolfe at the NASP and American Health Institute Critical Skills and Issues in School Psychology Summer Conference in Atlantic City, New Jersey. The workshops utilized their book Fostering Independent Learning: Practical Strategies to Promote Student Success. Harvey also took a prominent role at the annual meeting of the American Psychological Association in Boston in August, leading a poster session, titled “Two Investigations into School Psychologist Supervision and Professional Development,” and chairing a symposium, titled “Strategies to Facilitate Effective Supervision of School Psychologists.” Harvey also coordinated, and presented at, three Supervision Institute events for 55 Massachusetts supervisors of school psychology interns and practicum students.

College of Management assistant professor of management science and information systems Ehsan Ehlbaki participated in a Global Supply Chain podcast sponsored by Lexington Insurance Company.

Assistant Professor of Spanish Studies Wanda Rivera-Rivera presented a paper, titled “Confined Subjectivities in Spanish-American Literature: José Martí, César Vallejo, and Francisco Matos Paoli,” at the XXXVII Congresso Internacional do Instituto Internacional de Literatura Bresolamericana, Benemérita Universidad Autónoma de Puebla, Facultad de Filosofía y Letras, held June 24 through 28 in Puebla, Mexico.

Department of Counseling and School Psychology chair Gonzalo Banaguape presented “Latino families’ immigrant health access in Metropolitan Miami” at a Fullbright Scholars Poster Session at the American Psychological Association’s annual meeting in Boston. He also gave a presentation, “Participatory action research in post-disaster recovery: Collaborating from the start,” and co-presented “Disaster-related Inquiry” at the 4th International Congress of Qualitative Inquiry, held at the University of Illinois at Urbana-Champaign.

Assistant Professor of Political Science C. Heke Schotten presented two papers at the annual American Political Science Association 2008 conference: “Can Friedrich Nietzsche’s Philosophical Critique of the State Still Be Claimed as a Weapon for the Weak?” and a second, co-authored with Richard Juang of the National Center for Transgender Equality, “The Good, the Bad, and the Sanctionistious: What Nietzsche’s Genealogy of Morals Tells Us About Transphobia.”

Professor of Music Jon C. Mitchell presented a paper titled “Hale and Wind: Philip Hale’s Commentaries on Wind Ensemble Works Programmed by the Boston Symphony Orchestra, 1890-1932” at the XVIII Conference of the International Society for the Promotion and Investigation of Wind Music at Eternach, Luxembourg, on July 11.

Director of Academic Support Programs Mark Pawlik took part in a literacy publisher’s panel at the 46th annual Cape Cod Writers Conference, held August 18 at the Craigville Conference Center.

Professor Felicia Wilczewska of the Graduate College of Education and graduate student Matthew Smith, Director of Academic Support Programs, presented a workshop, titled “Building Developmental Assets through Service Learning,” at the annual meeting of the American School Counselor Association in Atlanta.

Lara Encin-Dovovan of the Institute for Community Inclusion coordinat- ed a training session at Holy Cross in Worcester on August 13. “Serving Our Students Who Are Deaf or Hard of Hearing: Employment Practices” had over 30 participants from various sectors of the vocational rehabilitation field.

Several staffers from the Institute for Community Inclusion played a prominent role in this year’s National APSE Conference in Louisville, Kentucky. Joe Marrone delivered the closing keynote speech, while Gil Cote, David Hoff, Sheila Fesko, Diane Land, and Cecilia Gandolfo presented at least one conference workshop.

PUBLICATIONS

Assistant Professor of History Ruth Miller’s new book, The Erotica of Corruption: Law, Scandal, and Political Corruption, has been published by SUNY Press.

Professor of Political Policy and Public Affairs Christian Weller wrote about the need for health insurance and re- tirement saving reform for the Center for American Progress on July 23, and, as a guest blogger, wrote “Mc Cain Doesn’t Want You to Retire” on the web site The Wonk Room.

Professor of Economics Mary Haff Stevenson co-authored The Urban Experience: Economics, Society, and Public Policy, an urban policy textbook recently published by Oxford University Press.

Professor Emerita of Community Planning Marnie Kennedy co-wrote an article, titled “They work here, they live here, they stay here!” about an estimated half-million undocumented immigrants in France for the July 20 edition of Dollars and Sense, and published “What About an Anti-Imperialist, Anti-Corporate Planning?” in the Winter 2008 issue of Progressive Planning.

College of Management professor Leon Zurawicki and Associate Professor Mohsin Habib’s book, “Corruption and Foreign Direct In- vestment: What Have We Learned?” received the Best Paper Award at the Economics and Business Research Conference in Salzburg, July 2008.

Assistant Professor of Political Sci- ence Erin E. O’Brien’s book The Politics of Identity: Solidarity Build- ing Among America’s Working Poor was published in July by the State University of New York Press. Her book appears in Anne Schneider and Helen Ingram’s public policy series. Assistant Professor of Political...
CM Founder Retires, But His Name Will Remain

Professor Peter McClure (above), a founding faculty member of the College of Management, retired at the end of the academic year with a new title of Professor Emeritus, for the first time. A May 9 Faculty Recognition Dinner event, also part of the Peter J. McClure Faculty Research Fellowship on the Management of a Diverse Workforce. (Photo by Harry Brett)

A paper co-authored by Management and Marketing Professors Leon Zurawicki and Mohsin Habib, titled “Corruption and Foreign Direct Investment: What Have We Learned?” received the Best Paper Award at the Economics and Business Research Conference held in Salzburg, Austria, in June. Associate Professor of Art Nancy Steiber spent the spring semester as a fellow in residence at the Netherlands Institute for Advanced Study in Wassenaar, the Netherlands, working on a book about Dutch modern architecture commissioned by Reaktion Books (London).

Robert Weiner, graduate program director in the international relations track of the McCormack Graduate School of Policy Studies, has been invited to participate in the Global Integrity Report 2008 fieldwork as a peer reviewer for Moldova and Romania. Global Integrity is a prize-winning Washington-based NGO which generates, synthesizes, and disseminates credible, comprehensive, and timely information on governance and corruption trends around the world.

Professor Rona Flippo of the Department of Curriculum and Instruction in the Graduate College of Education was honored as a Sustaining Member of the College Reading Association (CRA) and featured in their Spring/Summer 2008 newsletter, Reading News.
