# ThinkWork!

Advancing employment and opportunity for people with intellectual and developmental disabilities

This report is a product of *Access to Integrated Employment* with additional support from the *Partnerships in Employment Systems Change Training and Technical Assistance Center*, projects of *ThinkWork!* at the Institute for Community Inclusion, University of Massachusetts Boston, with support from the Administration on Intellectual and Developmental Disabilities, Administration for Community Living, US Department of Health and Human Services, under cooperative agreement #90DN0295 and 90DN0290. The opinions contained in this report are those of the grantee and do not necessarily reflect those of the funders.

## Introduction

This report summarizes the employment and economic outcomes for young adults with intellectual disabilities between 2006 and 2013 in the nation's 50 states and the District of Columbia (DC). Data are reported separately for two age groups: 16 to 21 years old, and 22 to 30 years old. The first age group includes young adults who may still be eligible for school services (through age 21), whereas the second age group includes young adults who have left the education system.

Data are drawn from three sources: the American Community Survey (ACS), the Rehabilitation Services Administration 911 (RSA-911), and the National Core Indicators (NCI).

## American Community Survey (ACS)

The ACS collects information annually from a sample of about three million people randomly selected from the 50 states and DC. The survey is carried out by the US Census Bureau to better understand changing communities, with the goal of informing state and national policies. Topics include gender, age, race, disability, education, employment, income, commute time to work, veteran status, and other demographic and personal data.

In this report, we compare summary data regarding three groups of people:

1. People without disabilities
2. People with any types of disabilities
3. People with cognitive disabilities

Cognitive disability in the ACS is the category that most closely approximates the category of intellectual and developmental disabilities. The ACS identifies a person as having cognitive disabilities when a “yes” response was provided to the following question: “Because of a physical, mental, or emotional condition, does this person have serious difficulty concentrating, remembering, or making decisions?”

However, note that before 2008 the definition of this group category was slightly different. Participants were identified as having a “mental disability”—instead of cognitive disability—if they reported difficulties in learning, remembering, or concentrating because of a physical, mental, or emotional condition lasting six months or more. Due to this change in disability definition, any comparison of disability data before and after 2008 is challenging.

For each of the three groups, we show estimates regarding the following variables:

1. Total number of individuals
2. Percentage employed
3. Mean annual earnings (Adjusted for inflation)
4. Mean weekly work hours
5. Percentage with a high school diploma or GED

Estimates are generated using the weights provided with the sample data.

## Rehabilitation Services Administration 911 (RSA-911)

The RSA-911 is an administrative case-reporting database that captures characteristics, services provided, and employment outcomes of people with any type of disability who applied to a state vocational rehabilitation (VR) program. Every year, RSA911 data are released regarding the about 600,000 people who exited the VR program during the prior fiscal year.

In this report, “intellectual disability” refers to a person for whom code 25 (“mental retardation” in the RSA-911 dataset) was reported as the cause of either a primary or secondary impairment to employment. We show the following data items for people with intellectual disabilities and people with any disabilities:

1. Total number of closures
2. Rehabilitation rate
3. Percentage employed of the total
4. Mean weekly earnings (Adjusted for inflation)
5. Mean weekly work hours

The total number of closures represents the number of people who exited the VR program in any given year. This includes people who were not eligible (a very small number), people who were eligible but did not receive services, people who received services but did not gain employment, and people who gained employment. In addition, we report the percentage of people with intellectual disabilities who exited the VR program out of the total number of people with any disabilities who exited the program.

The rehabilitation rate represents the percentage of people who gained employment (formerly Status 26) out of the total number of people who received services (formerly Status 28).

The percentage employed of the total represents the proportion of people who gained employment out of the total number of people who exited the VR program, regardless of whether they received services or even whether they were determined eligible.

The RSA-911 includes different types of employment. The most frequent type is integrated employment with or without supports. Other less frequent employment categories include self-employment, state-agency-managed business enterprise, homemaker, and unpaid family worker.

In contrast to the ACS—which is based on estimates from a random sample—the RSA-911 data reflect the actual figures from the entire population of people who exited the VR program. Therefore, we reported data for all states and all variables, regardless of population sizes. However, readers should be aware that smaller states may have smaller population sizes of young adults with intellectual disabilities, resulting in unexpected greater fluctuations of the rehabilitation rates, employment rates, earnings, and work hours for those states.

## National Core Indicators (NCI)

The National Core Indicator (NCI) data track outcomes of people with intellectual disabilities who received services from 30 state intellectual and developmental disabilities agencies.

Data are collected from a random sample of individuals who received services from these state agencies. Data are then aggregated and used to support state efforts to strengthen long-term care policy, inform the conduct of quality assurance activities, and compare state performance with national norms. The NCI is coordinated through the National Association of State Directors of Developmental Disabilities Services and the Human Services Research Institute (<http://www.nationalcoreindicators.org/>).

In this report, we show the employment outcomes of adults with intellectual or developmental disabilities, ages 18–21 and 22–30, for the years 2010–2014, as provided by the Human Services Research Institute. We show data about the following items:

1. Total reporting
2. Percentage in integrated employment
3. Percentage in individual employment
4. Two-week earnings (Adjusted for inflation)
5. Two-week work hours

Integrated employment includes both individual employment and group employment (e.g. work crews and enclaves) whereas individual employment excludes group employment. Blank cells indicate that data for a specific variable in that specific year were not available. Due to the small number of total reporting agencies in some states, comparison of the percentages of people employed, earnings, and work hours across states and years should be made with caution.
