This Presentation is brought to you for free and open access by the Office of Community Partnerships at ScholarWorks at UMass Boston. It has been accepted for inclusion in Office of Community Partnerships Posters by an authorized administrator of ScholarWorks at UMass Boston. For more information, please contact library.uasc@umb.edu.
Environmental challenges do not recognize disciplinary, socio-economic, or geographic boundaries. To support the development of environmental problem-solvers we deeply engage undergraduate and graduate students in solving real-world environmental problems through innovation and sustainability-focused courses and research experiences. These experiences directly engage local communities in the development and implementation of environmental solutions.

**Goals and Objectives**

A curriculum that engages students in the environmental disciplines providing core training in the natural sciences and the social sciences.

Hands-on experience in the field and laboratory working on locally important environmental problems with global connections.

**Approaches and Methods**

- Environmental problem solving from first year Gateway Seminar to senior Capstone.
- Locally engaged across the world.
- Integrated human-natural systems training.
- Direct linkages to community expertise.

**Impacts**

Integrating community-based research through partnerships with agencies and community organizations.

Serving the communities around Boston Harbor.

Solving local problems with local communities.

Providing that ‘missing link’ between green education, green job and green economy.

**Next Steps**

Environmental Action Teams.

Science in Service to the Community.

Applying sustainable Solutions.
