The Unequal Burden of Debt and Its Impact on Health

Elizabeth Sweet, PhD, MPH & Zachary DuBois, PhD
 Anthropology Department, University of Massachusetts Boston

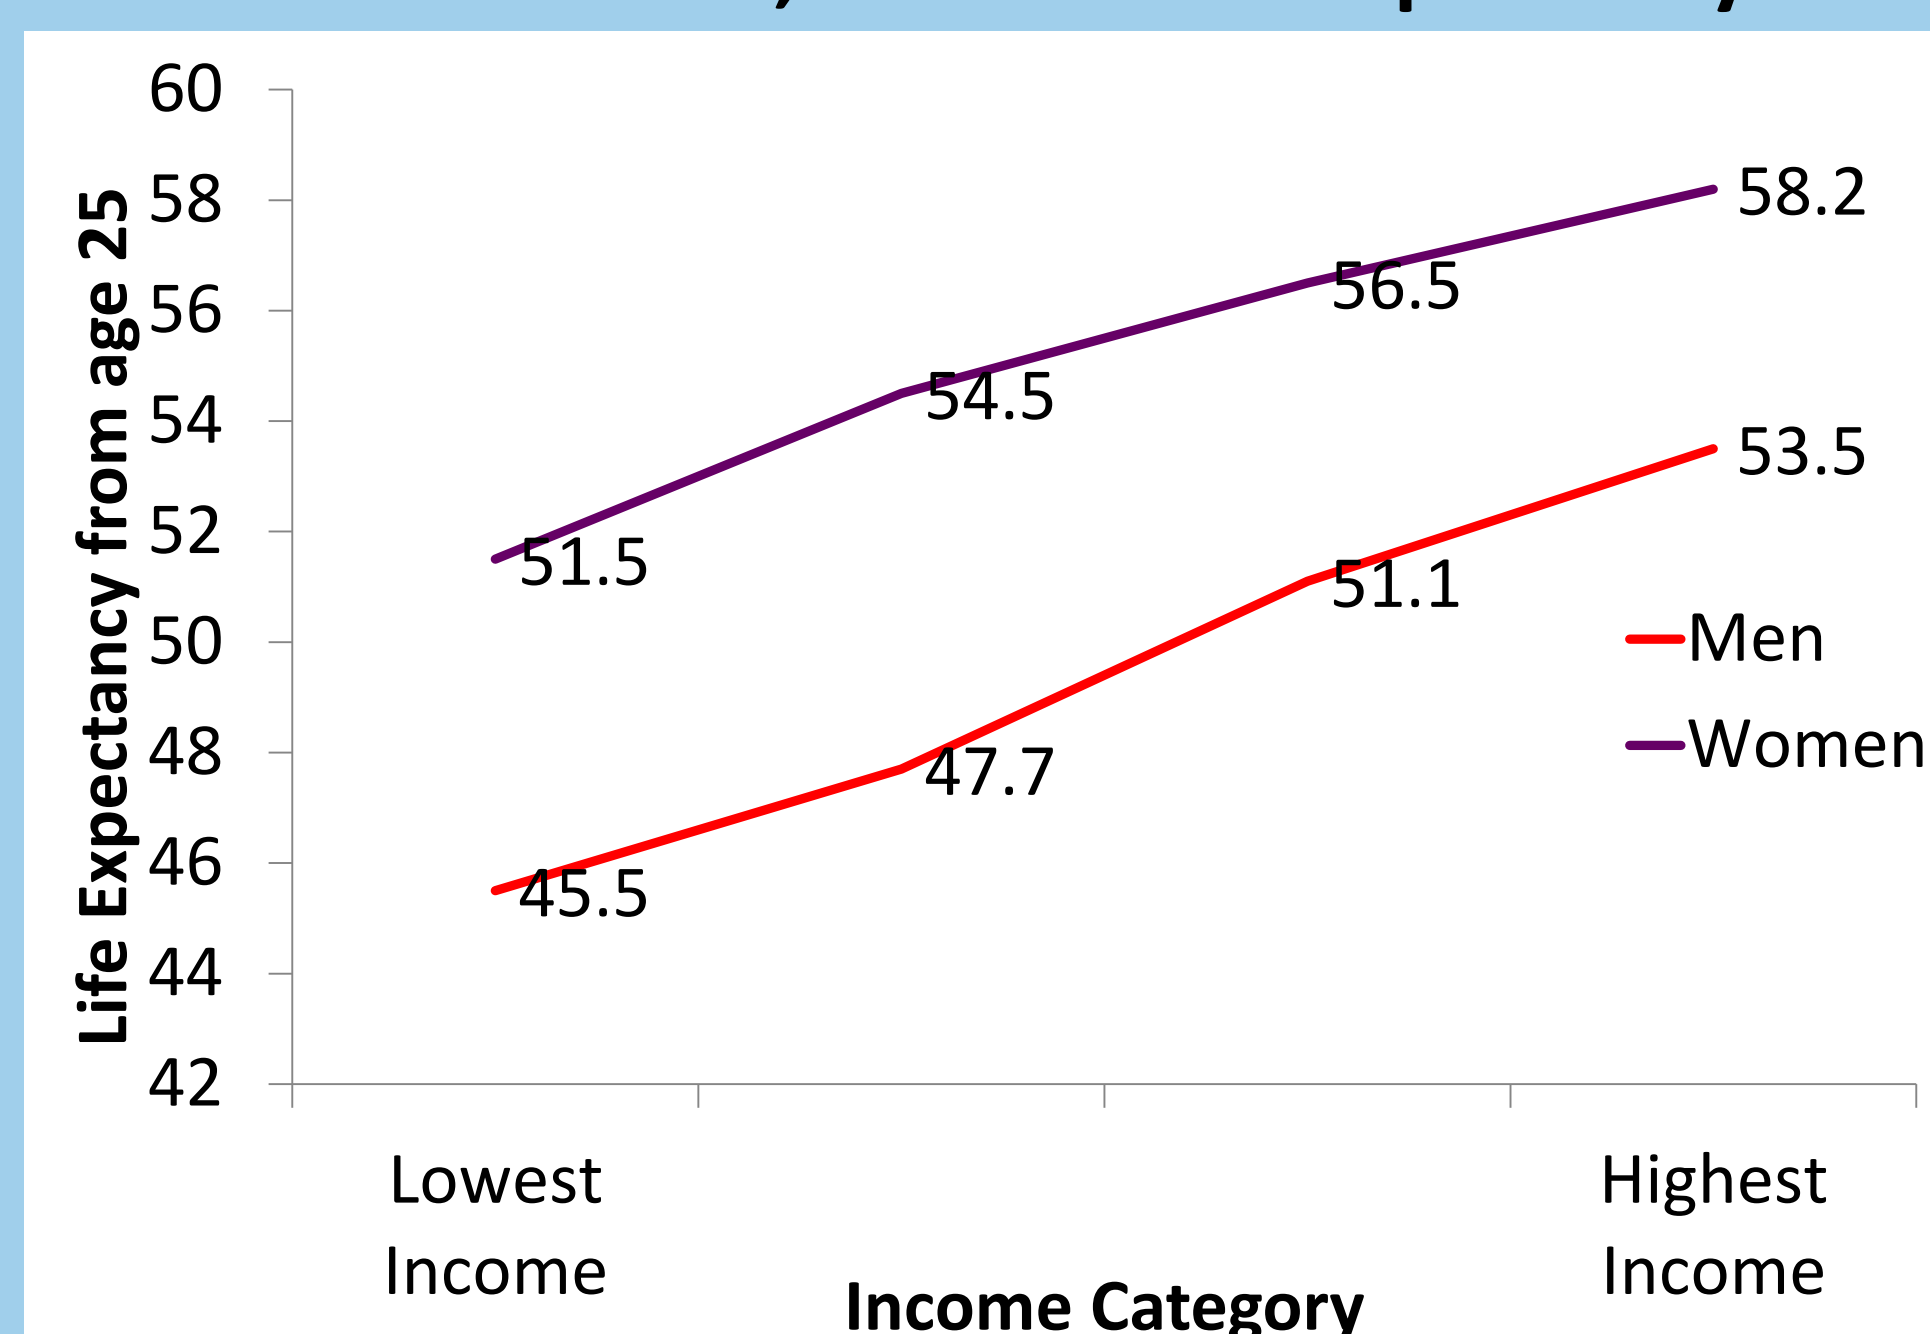

Summary/Abstract

Average household debt in America has tripled in the past 30 years.¹ Much of this burden is unequally borne by racial/ethnic minorities and those with lower incomes, who face discrimination in obtaining loans and must devote more household resources to paying off debts.^{2, 3}

Being indebted is a strong predictor of suicide, depression, and other adverse mental health outcomes. However, its impact on physical health is underexplored.⁴

Inequality is Reflected in the Body: Lower Income, Shorter Life Expectancy

Age adjusted, data from National Health Interview Survey, RWJF www.commissionhealth.org

Goals

Using a community-based, mixed-methods approach, this project aims to elucidate debt as a socioeconomic determinant of physical health. Specifically, we aim to learn:

- *The diverse aspects of debt that people experience*
- *How debt is patterned across race, ethnicity, and income*
- *What types of financial debt influence health and well-being*

We will work with community and neighborhood-based organizations to recruit study participants from the diverse neighborhood of Dorchester, MA.

Impacts and Next Steps

By elucidating mechanisms and pinpointing specific profiles of debt-related disease risk, we hope to lay the groundwork for the development of targeted future intervention strategies. Our next steps:

- **Develop community partnerships**
- **Convene a Community Advisory Panel**
- **Begin qualitative interviewing**
- **Measure biomarkers of health among a diverse sample of Dorchester residents**

Approaches and Methods

Data Collection

Phase 1: In-depth, in-person Interviews with 100 participants to learn about their experiences with financial debt

- Identify the many types of debt and debt experience

Phase 2: Interviews and biomarker measures involving 500 participants to examine the effects of specific types of debt on health

- Blood pressure
- C-Reactive Protein (inflammation)
- Epstein Barr Virus antibodies (immune function)

Community Engagement

Community Advisory Panel

- Involved in all phases of the study
- Provide insights and suggestions
- Review study findings
- Contribute to dissemination plan
