Data set: MR/DD

Relationship between integrated employment and state unemployment rates for MR/DD consumers

State mental retardation/developmental disability (MR/DD) agencies provided day and employment supports to over 466,500 people in 2001. Approximately 23% of individuals supported by MR/DD agencies nationwide were employed in integrated employment settings, with individual state outcomes ranging from 2% to 56%.

Researchers explored state unemployment rates to determine whether a state's MR/DD agency employment outcomes were related to the state's economy. The following table and maps compare the percentage of consumers working in integrated employment with state unemployment rates (UR), rounded to the nearest percentage point.

There was no significant correlation between the percentage of consumers in integrated employment and unemployment rate. This finding suggests that in 2001, a state's unemployment rate was not related to its integrated employment outcomes for individuals supported by state MR/DD agencies.

State	Integrated %	UR %	State	Integrated %	UR %	State	Integrated %	UR %
AK	48	6	KY	29	5	NY	20	5
